

BIO 116 : Principles of Biology II Lab

Spring

This introductory course provides an overview of the basic principles of biology including the structure and function of animals and plants, including organ systems, reproduction and the regulation of body systems. The course also provides an overview of the Earth's ecosystems and the diversity of life within each ecosystem. Lab experiments are designed to teach basic scientific skills, and to reinforce the topics covered during lectures. This course is designed to prepare students for more advanced courses in biology.
